

SETTING UP A PRINTER IN CSF

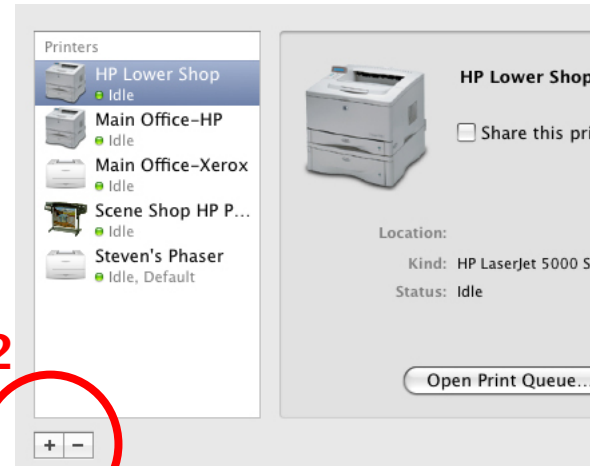

Mac OS **X.5**

This print tutorial should work for both wireless and wired connections. The University's wireless network has a very aggressive firewall- if you're having trouble connecting to a printer, connect to an ethernet jack, and try again!

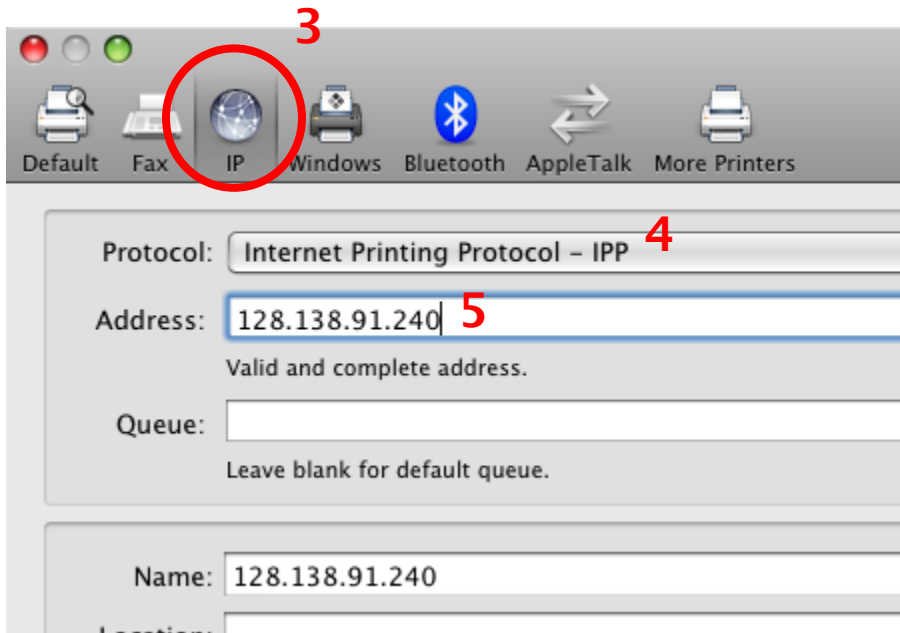

1. Go to your System Preferences window, and choose "Print & Fax"

2. Click on the "+" button to add a printer

3. Choose the "IP" protocol

4. Choose the "Internet Printing Protocol"

Because of the University's vicious firewall, other protocols don't always work (especially with wireless connections) use IP/IPP!

5. Type in the address:

SM Office HP Laserjet:

128.138.91.240

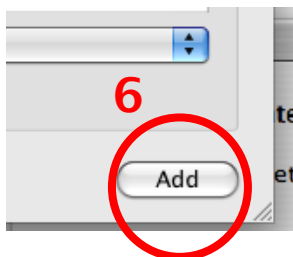

Scene Shop Laserjet:

128.138.91.228

Main Office Xerox Copier/Printer

128.138.91.243

6. Hit the "Add" Button

That's it! This will take you back to the menu, and you should see a list that looks like this. >>>>>>>>

Want to give your printer a descriptive name? Highlight a printer, and hit the "Options & Supplies" button. This will allow you to give the printer a name like "The One Near My Desk..."
